

Approaching To Turn Right

Name: Date:

Your completed questions form part of the coursework required for assessment. Please contact Training Support for details of how to submit your work.

Please tick or underline each correct answer.

1. To help learners judge the speed and distance of approaching traffic when turning right you can use the:

- a. two-second rule;
- b. drive-across rule;
- c. jog-across rule;
- d. walk-across rule;

2. In one of the videos Graham demonstrates turning right from main roads to side roads; in total he gives demonstrations at:

- a. one junction;
- b. two junctions;
- c. three junctions;
- d. four junctions;

3. DriverActive suggests that driving test examiners will be particularly careful when watching right turns because:

- a. they carry a high accident risk;
- b. lots of test candidates cut corners;
- c. there is a danger to pedestrians who are crossing;
- d. of the dangers of flashing headlamps;

4. When teaching right turns from major to minor roads you should teach your learners that a quick blind spot check can be valuable just:

- a. before signalling;
- b. before slowing down;
- c. before turning;
- d. after turning;

5. If a learner cuts a right-hand corner it's likely that:

- a. you will need to pull up to discuss it;
- b. you will be able to deal with it on the move;
- c. you will leave any explanation until the lesson de-brief;
- d. the car will always be in a dangerous position;

6. When waiting to turn right from a major to minor road an oncoming driver flashes their headlights. You should advise your learner to:

- a. move away quickly without hesitation;
- b. ignore the signal;
- c. make sure that the signal is for him/her;
- d. flash back to say 'thank you';

7. If using the 'walk across' rule you should explain that the learner would need enough time to walk:

- a. from the centre line to the right footpath;
- b. across the full width of the road;
- c. across the width of the side road;
- d. five car lengths;

8. In the videos John explains a right turn observation problem that could take hours to fix if you are not aware of it. The symptoms are that the learner:

- a. looks to the left;
- b. looks to the right;
- c. goes too fast;
- d. lifts their chin up;

9. When turning right from a main road into a side road it's important that you do not allow them to stop too far forwards. The waiting position that we suggest is with the front of the bonnet:

- a. in line with the centre line of the side road;
- b. around half a car length in front of the centre line of the side road;
- c. around one car length back from the centre line of the side road;
- d. around half a car length back from the centre line of the side road;

10. DriverActive recommends a method for enabling drivers to make better progress when turning right. The advice given is:

- a. slow down to go quicker;
- b. turn quick, be slick;
- c. try to beat approaching vehicles;
- d. don't use the handbrake when waiting;
